Practical 5: Workflow Customization

A. Design a custom workflow.

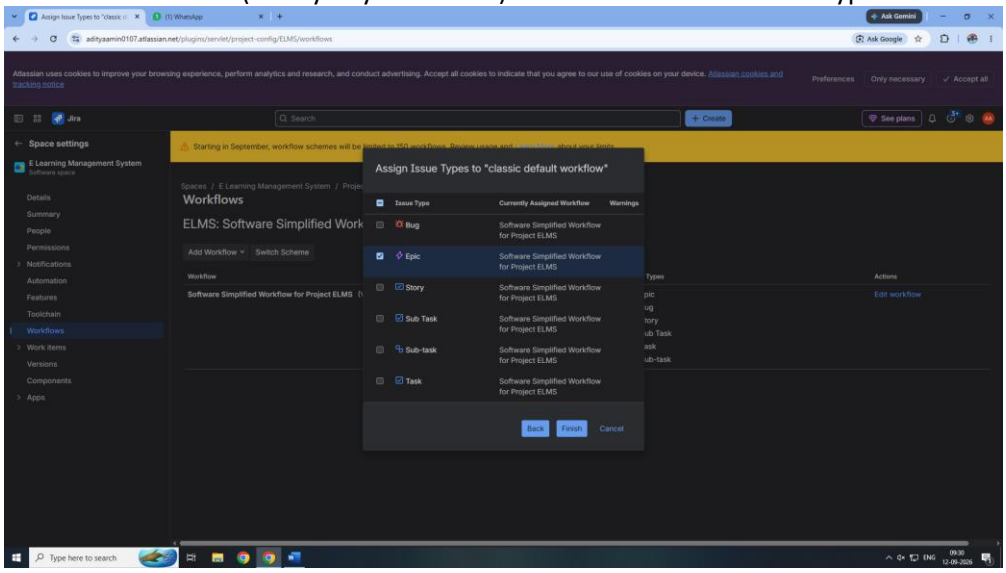

Click Space Settings -> Click Workflow.

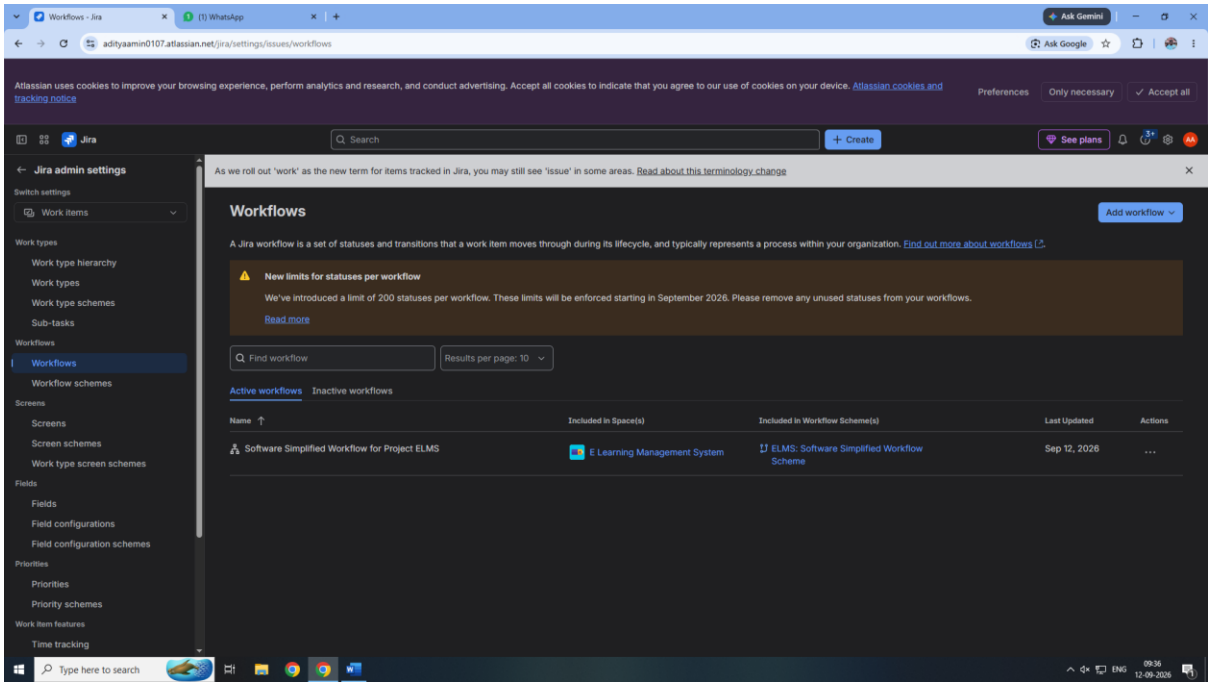

Select Workflow from Add Existing Workflow.

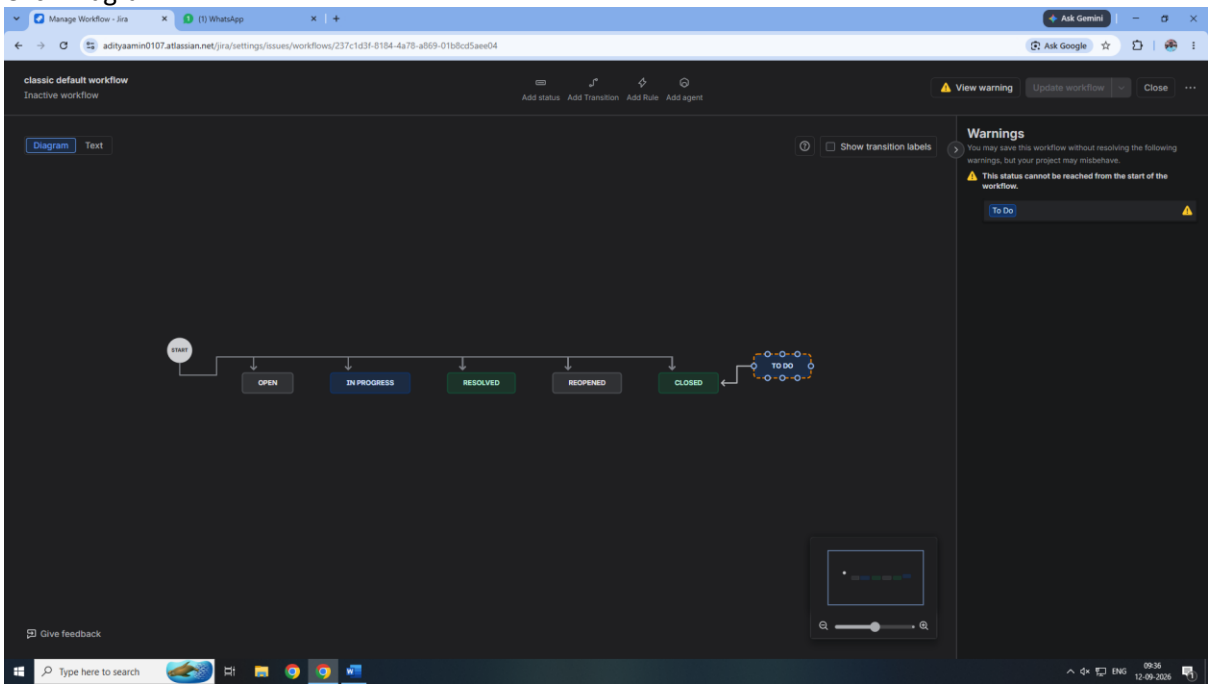

Click Classic default (or any of your choice) -> Click Next -> Click issue type.

Click Finish.

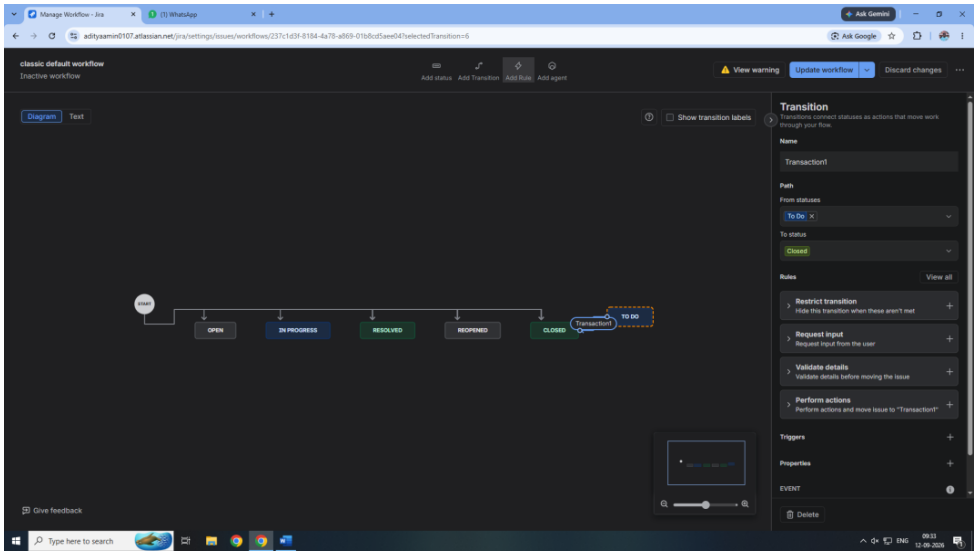

Click Diagram.

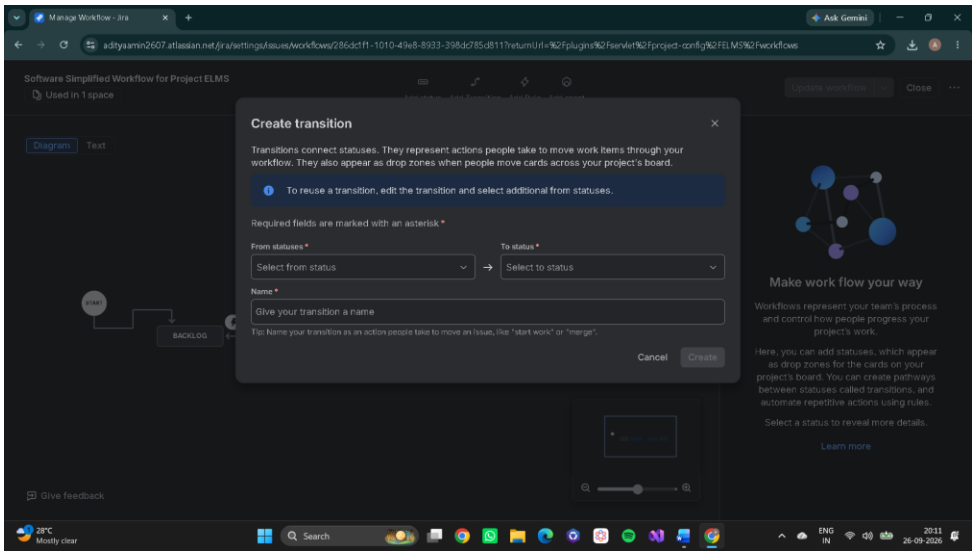

B. Add transitions and conditions.

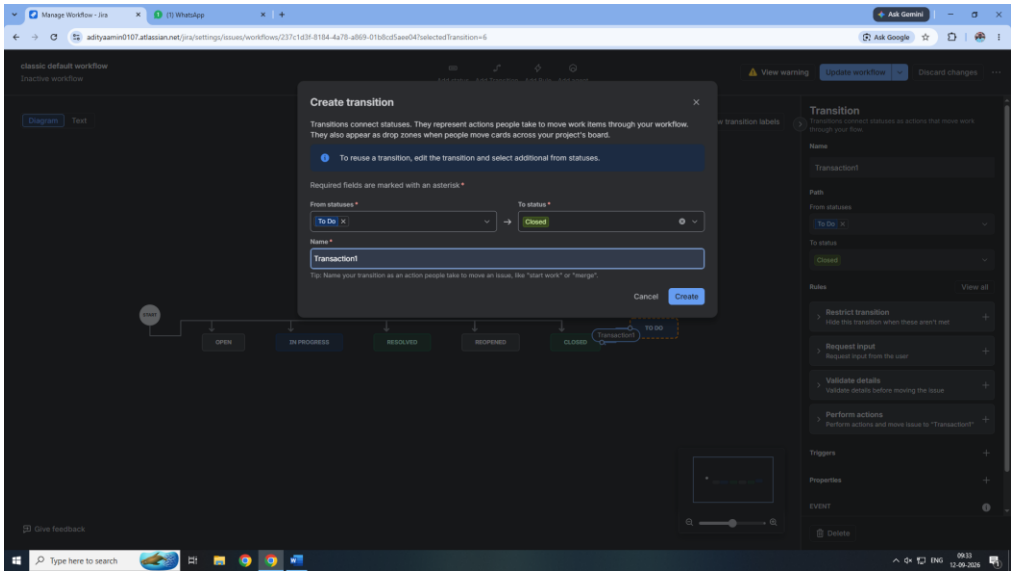

Click edit Workflow.

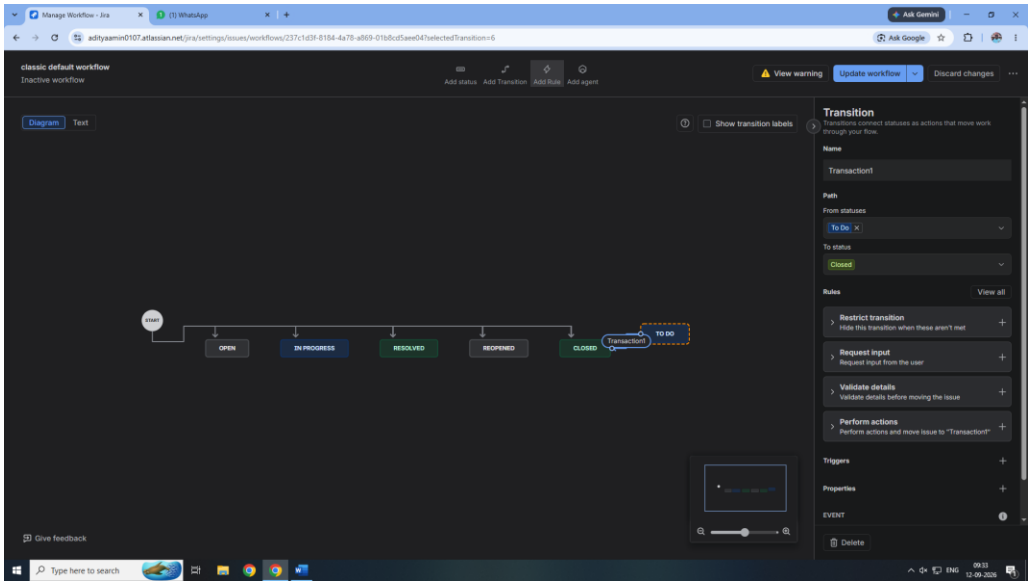

Click Add Transition.

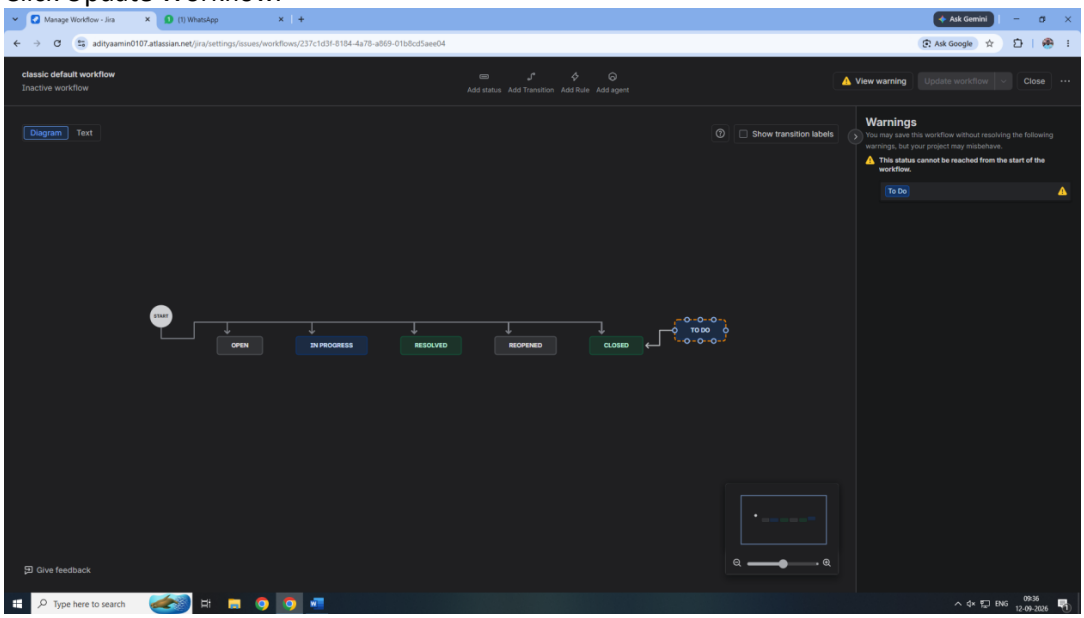

Enter desired transition.

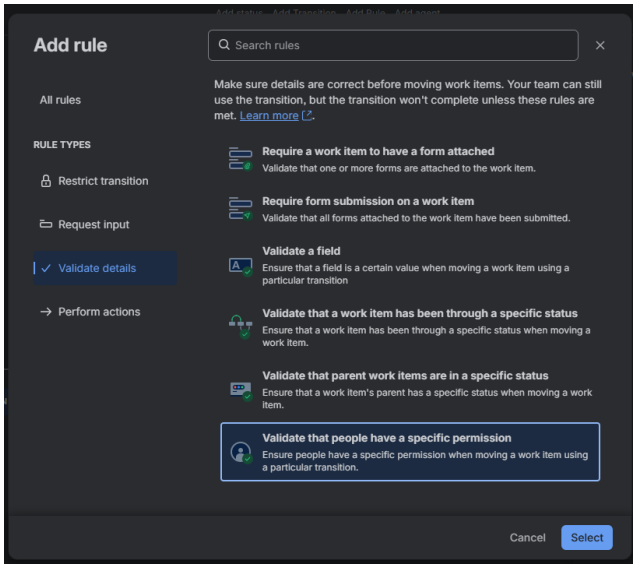

Click Create.

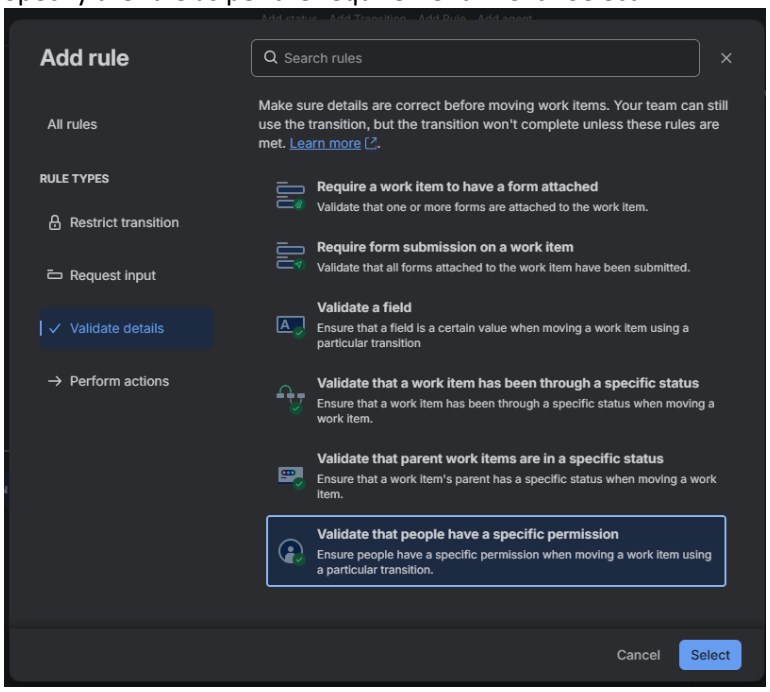

Click Update Workflow.

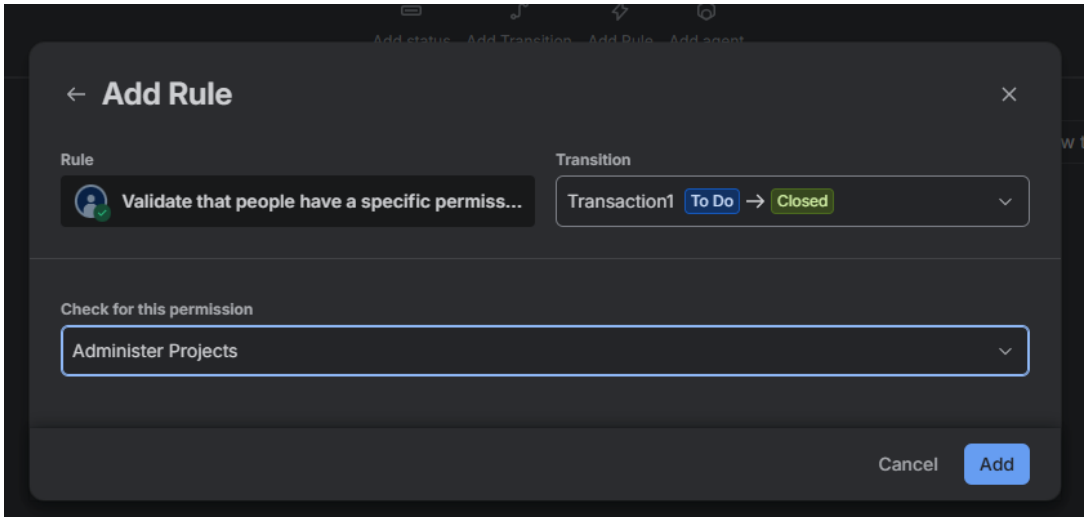

Click Add Rule toad condition.

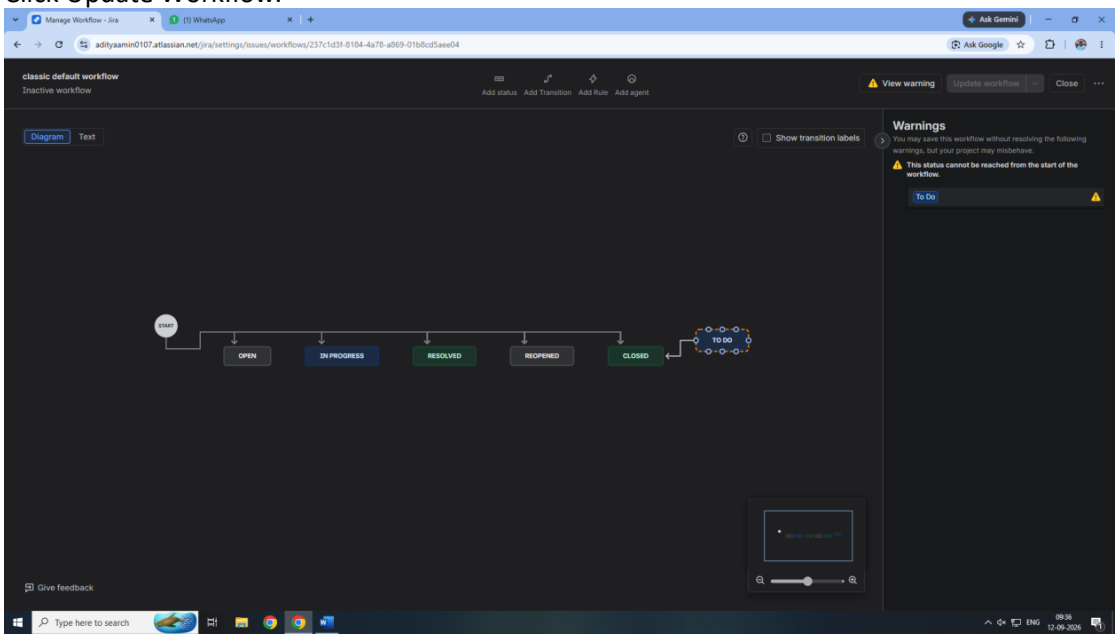

Specify the rule as per the requirement -> Click Select.

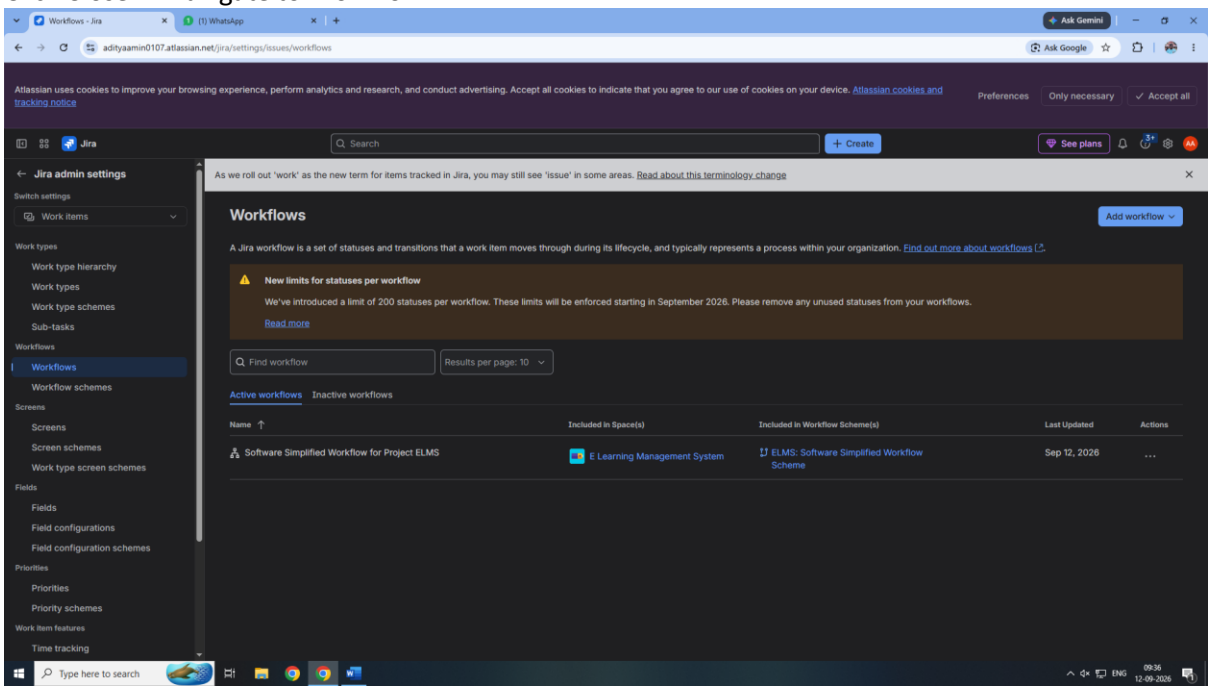

Add Rule -> Click Add.

Click Update Workflow.

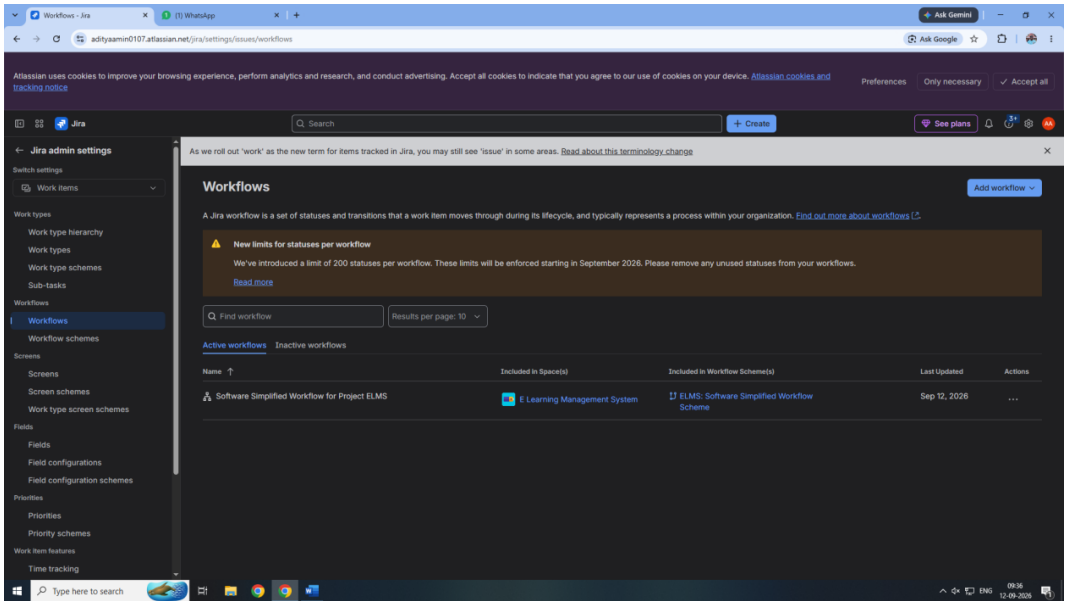

Click Close -> Navigate to Workflow.

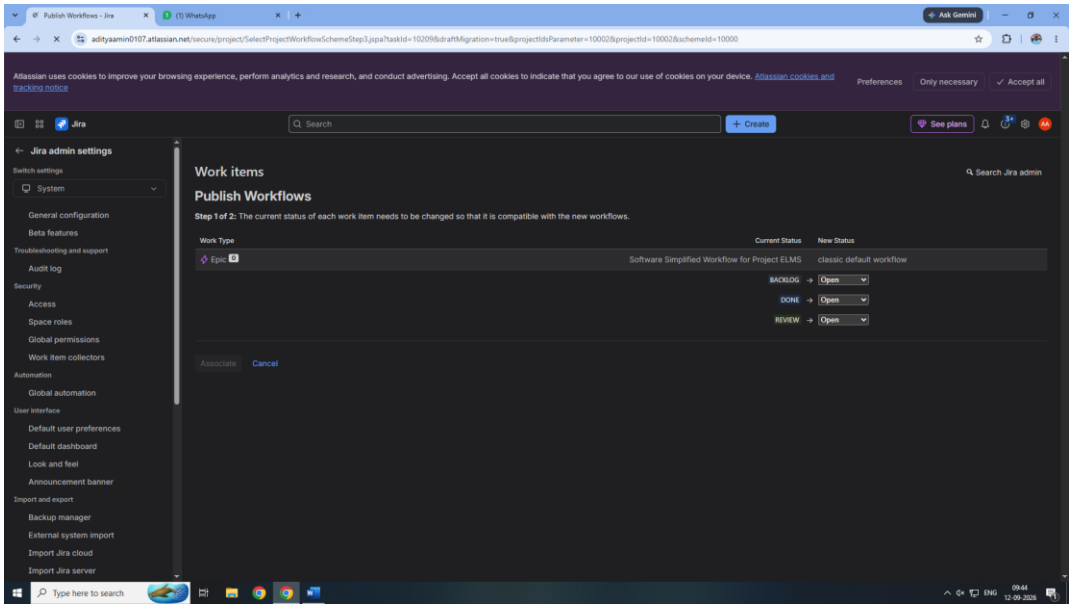

C. Publish and associate workflow with a project.

Click Publish.

Select Associate.

Workflow is updating -> Click Acknowledge.
